## *.regional overview*

Finland is in good economic shape and its **GDP per capita** and all other important economic indicators are growing steadily. Although GDP per capita is above the European average, it is the lowest among the Scandinavian countries.

Compared to Sweden and Norway, it has a significantly **smaller balance of trade**, which means that exports and imports are relatively in balance.

## *.country perspective*

The country has acceptable labour productivity, which is growing year-on-year, with **Publishing of computer games** being the most productive sub-sector.

---

**Turnover CAGR (4y) in the IT & Consumer electronics sector of Finland is 4.74 %, with total value of 144 billion €**

---

## *.industry insights*

As for the IT sector itself, the results are more than **favourable**. New companies are being added to the sector and old ones are being retained after a relatively long period of time. The sector is dominated by Computer programming activities, Computer consultancy activities and Publishing of computer games, which account for **72% of turnover in the sector**.

**.Finland has the lowest GDP per capita among the scandinavian countries**

Even though the GDP per capita of Finland (45.5K€) is above the EU average, it is lowest value among the scandinavian countries.

However, there is a positive trend in GDP per capita growth, which percentually corresponds with other countries.

Since 2016 the domestic product grew by almost 6K€ which represents 2.87% CAGR between 2016 and 2021. However, the growth rate was slightly better in Estonia, Denmark and Norway.

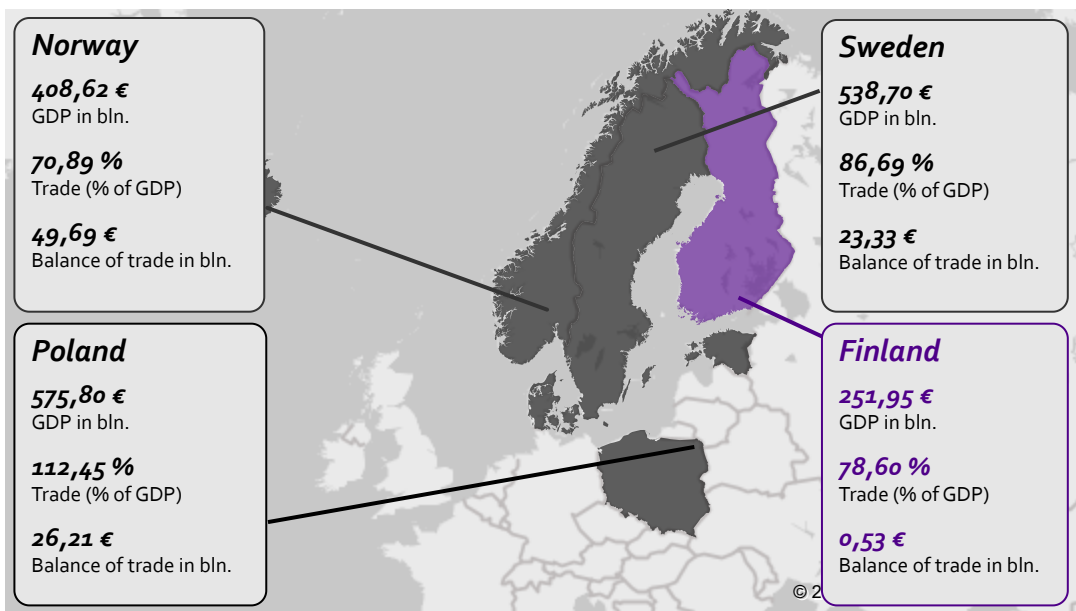

**.impact of trade on GDP**

The gross domestic product of Finland has total value of 251 billion €. International trade is an important aspect of a country's economic development and it represents 78.6% share of GDP (sum of exports and imports measured as a share of GDP). Nevertheless, other countries in the region are able to generate much more positive trade balances (export - import).

Chart 1: GDP per capita (in thousand €)

Map: Regional overview with main indicators

**.national Income Per Capita**

(NIPC) has been steadily growing since 2012. It grew **from 30K€ to 35.4K€**, however in 2020 global disruptive events caused decline. The quality of life in Finland remains high, which is also associated with a relatively high per capita income.

Not significant difference between Finnish GDP and GNI p.c. values may indicate that FDI rate is not that high, as we can see below.

**4-year CAGR of National Income Per Capita of Finland is 1.23%**

Net FDI inflows of Finland have been oscillating in recent years. In 2015, 2017 and 2019, they amounted to a flattering **15 bil. €**. However, in 2020 and 2018 Finland experienced significant disinvestment. Negative values of FDI net inflows for a particular year show that the value of disinvestment by foreign investors was more

than the value of capital newly invested in the reporting economy. Nevertheless, it is very easy and inexpensive to start a business in Finland - starting a business score of **93.5** out of 100 is one of the best rating within the whole world.

**.the inflation rate in Finland** was **2.19%** (in 2021). Meanwhile the inflation peaked at **9.1%** in winter of 2022, with current value of approximately **6.3%**. The percentage of GDP spent on R&D is another positive regarding Finland's macroeconomic performance. The value of **2.94%** (which is more than the EU average of 1.7%) represents an outstanding attention to science and innovation. Lastly, only **42.0%** of firms in Finland rely on banks to finance their **working capital**, which is a similar share compared to Denmark (42.7%) and a bit higher share than in Sweden (25%).

**.the Finland IT & Consumer Electronics sector is the second greatest among Scandinavian countries**

There is clearly a **positive trend** in the growth of turnover in the sector. All countries in the region have seen growth over the last three years, with the most significant being in Poland, where the 4-year CAGR was **7.81%**.

As far as Finland is concerned, **turnover growth** in the sector is **stable**. The highest year-over-year growth was recorded in 2017 and 2019, respectively (which also corresponds with the FDI values, which were the highest in those years).

**Turnover CAGR (4y) in the IT & Consumer electronics sector is 6.1%, with total value of 114 billion €**

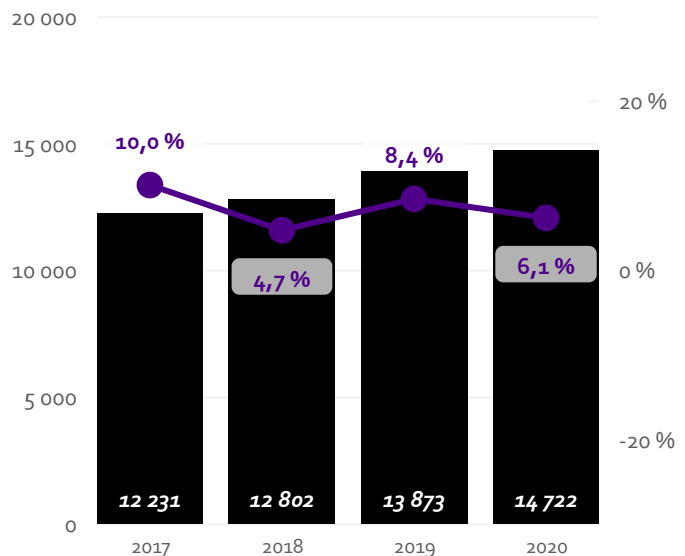

**.the finnish and IT related subsectors** reported a robust total turnover of **14.7 billion €** in 2020, with an average year-over-year growth of **6.12%**. The top three subsectors driving this success were **Computer programming activities** (6 bil. €), **Computer consultancy activities** (2.4 bil. €), and **Publishing of computer games** (2.2 bil. €).

Chart 3: Sector turnover in the region (in mil. €)

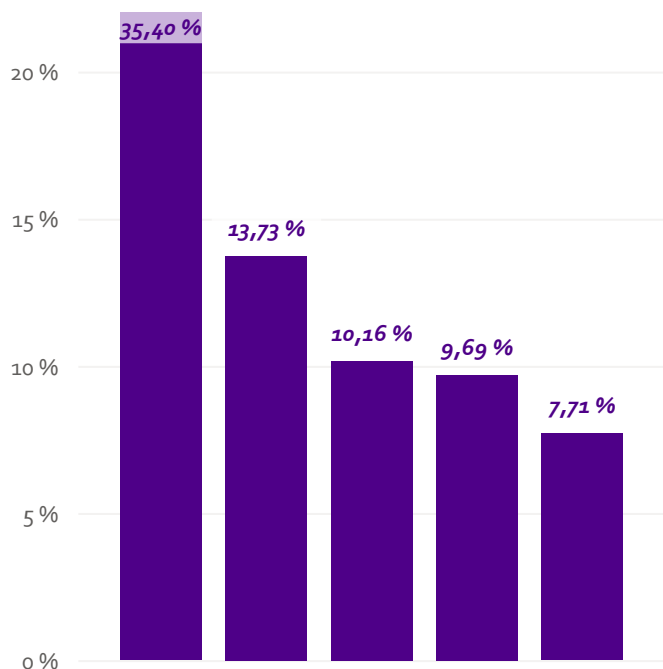

Source: Eurostat

Chart 4: Sector's turnover development (in mil.€) in the country compared to year-over-year turnover growth (%)

**Chart 5 & Table 1: Top 5 best performing sub-sectors according to turnover YoY**

Despite the positive trend in most subsectors, **Data processing, hosting, and related activities** experienced a decline of **-5.79%**, and **Web portals** suffered a significant downturn of **-51.57%**, possibly due to the rise of SaaS platforms and mobile apps. However, **Other information service activities** saw an impressive growth of **35.4%**, and **Computer consultancy activities** followed with **13.73%** year-over-year growth.

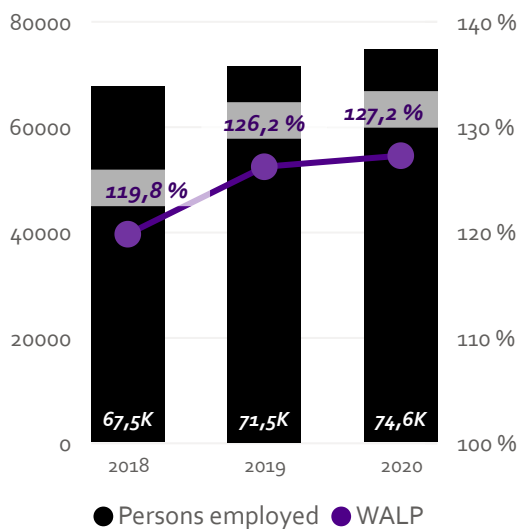

*.moreover*, the data processing subsector stood out with an impressive **GOS/Turnover ratio** of nearly **40%**, showcasing its financial strength. Overall, the Finnish IT industry displayed resilience, adapting to market demands and technological advancements.

Sub-sector	Turnover (mil. EUR)	Turnover YoY	Gross operating surplus (mil. EUR)	Gross operating surplus / Turnover
Other information service activities n.e.c.	122,4	35,40 %	7,00	5,80 %
Computer consultancy activities	2 421,3	13,73 %	276,50	11,40 %
Other information technology and computer service activities	345,8	10,16 %	9,90	2,90 %
Computer programming activities	6 095,7	9,69 %	704,30	11,60 %
Publishing of computer games	2 208,6	7,71 %	649,70	29,40 %

Chart 6: Persons employed and wage adjusted labour productivity median

*.both sector's employment and labour productivity are continuously increasing*

The chart 6 and Table 2 show WALP - a metric that takes into account both the value added and personnel costs of a business. The Wage-adjusted labour productivity of **127.8%** is indicating a quite low efficiency of the sector's businesses,. The largest sub-sector in terms of employment is 'Computer programming activities' with almost **46K** workers. Additionally, the 'Publishing of computer games' sub-

Table 2: Top 5 employers by subsector

Sub-sector	Persons employed	WALP
Computer programming activities	45682	119,60 %
Computer consultancy activities	12077	125,50 %

Data processing, hosting and related activities	3527	328,60 %
Publishing of computer games	1881	399,00 %

Source: Eurostat

sector is the most efficient one with an exceptional WALP of **399%**.

*.as mentioned in the regional overview section*, Finland has a great business environment. It is one of the **TOP 20** countries in terms of ease of doing business, has a relatively low tax burden (compared to other European countries) and has an efficient judiciary system where enforcement of judgement takes an average of **106 days**. Finland is a country of start-ups and these indicators only confirm a good **entrepreneurial ecosystem**.

### *.indicators*

Balance of trade - difference between the monetary value of a nation's exports and imports

Enterprise birth rate - number of births as a percentage of the population of active enterprises.

Trade as % of GDP - Trade is the sum of exports and imports of goods and services measured as a share of gross domestic product.

Wage-adjusted labor productivity (WALP) - metric that takes into account both the value added and personnel costs of a business

### *Abbreviations*

CAGR - compounded annual growth rate

EU - European union

FDI - Foreign direct investments

GNI p.c. - Gross national income per capita

GOS - Gross operating surplus

NIPC - National income per capita

R&D - research and development

ROI - return on investment

YoY - Year over Year

WALP - wage adjusted labour productivity

WC - working capital
